

MIS_ING LIN_S FOUND ***Proposal on education***

Let's bring new teaching methodologies to schools by providing a system that connects trainings to the needs of educational institutions.

Group Members:

David R., Eszter, Giulia, Slimane (Spain, Hungary, Germany, Italy)

SUMMARY

We feel that the current school system doesn't provide efficient learning environment neither for students, nor for teachers. One of the many causes are the outdated teaching methodologies. This problem could be solved by empowering the teachers and sending them to up-to-date trainings, but they are under too much pressure to put any effort into their own development. Therefore we propose a non-formal academy that delivers the information and the trainings directly to the schools. This way we would ease up the process of renewing their toolkits and support them into finding new opportunities.

THE PROPOSAL

All over Europe there are thousands of students who finish their studies completely unprepared to use the knowledge that they were supposed to acquire during those long years they spent in different kind of educational institutes. Thanks to the lack of stimulating and inspiring learning environment not all types of intelligences are developed. Nowadays most of the educational systems concentrate on just a few competences like mathematical or memorizing skills. Moreover the teachers are not well-prepared to use new and modern methodologies. They don't have the opportunity to learn and apply new teaching techniques because of the time and financial pressure that they experience.

All of this together leads to unmotivated, insensitive educators who cannot focus on the students' needs. Hence both parties are unsatisfied and we don't have competent youth that is able to lead their lives, find their professions and make good decisions.

Solutions:

As we find the teachers' lack of ability to learn and modernize their set of tools as one of the most urgent problems, we would like to make a change in this field. Our goal is to provide specific training programmes directly to schools and to promote existing materials, tools and courses to facilitate the process of teachers' improvement. For this we would like to create a system that has all the information and to actively deliver it to each school. We would have a team who gets in touch with the educational institutions and who offers them the opportunity to require a 'personalized' training package. Later on the academy would provide schools with the required trainings. In addition to this it would be possible to take part in a follow-up and evaluating event-series where schools can give feedback and ask for more trainings if needed.

We would use the participating schools to disseminate and invite other schools to be involved in the programme.
